CHASSIS

TYPHOON

A large 120mm grill-covered intake dominates TYPHOON and comes complete with the name of the case. The side of the case sports a blue plastic case window and 80mm exhaust fan, Raidmax-branded, runs at 12V, uses a Molex connection and has no LEDs. Fairly silent. There is a decent amount of room to work with. All of the drives are held in by special tool-less clips and the clips themselves work perfectly. Despite its price tag, TYPHOON does not make any sacrifices in aesthetics, build quality, and top features like cooling. Buyers on a budget will most likely find this case to be their primary choice.

■ FEATURES ■
